

Description

Yuanqing Li, Xiaoyuan Zhu, and Cuntai Guan
Institute for Infocomm Research, Singapore

The used method includes the following main steps:

1. CAR preprocessing;
2. Selection of frequency bands and channels using Fisher ratio;
3. Filtering the EEG signals in mu and beta bands;
4. Time bin selection based on cross-validation;
5. CSP feature extraction;
6. Retraining and Classification based on an extended EM algorithm.
